Customer Support Metrics – Source Data

Customer Support Metrics – Source Data

Reporting Period: July–December 2025

Purpose: Internal reference document providing source data and context for the *Customer Support Metrics Report*. This document is intended to support analysis, clarification and AI-assisted explanations. It is not shared externally.

---

1. Scope and Data Sources

The data in this document is aggregated from the following internal systems:

- Support ticketing system (all regions)
- CSAT post-resolution surveys
- Internal escalation logs
- Channel usage analytics

All figures represent closed tickets only, unless stated otherwise.

---

2. Overall Ticket Volume

- **Total tickets processed:** 184,600
- **Change vs. H1 2025:** +11%
- **Monthly peak:** September (approx. 17% of total H2 volume)
- **Lowest volume month:** December

Primary volume drivers:

- New customer onboarding
- Initial product configuration

- Integration enablement for enterprise accounts

---

3. Channel Breakdown

Channel	Ticket Count	Share of Total	Avg. First Response Time
Email	99,684	54%	3.1 hours
Live Chat	57,226	31%	1.2 hours
In-App Support	27,690	15%	2.4 hours

Notes:

- Live chat volume increased primarily among enterprise customers
- Email volume declined slightly compared to H1, but remains the dominant channel

---

4. Resolution and SLA Performance

- **Average first response time:** 2.4 hours
- **Average resolution time:** 18.7 hours
- **Tickets resolved within 24 hours:** 68%
- **Tickets requiring escalation:** 22%

Resolution time by case type:

- Standard requests: average 14.2 hours
- Integration-related cases: average 31.6 hours
- Billing-related cases: average 11.8 hours

---

5. Common Issue Categories (with Percentages)

Issue Category	Ticket Share
Account access and authentication	26%
Billing and invoice related questions	18%

Issue Category	Ticket Share
Feature usage clarification	21%
Integration setup	23%
Performance-related concerns	12%

Additional observations:

- Billing-related tickets declined by ~4% compared to H1 2025
- Integration-related issues increased steadily from October onward

---

6. Customer Satisfaction (CSAT)

- **Average CSAT score:** 4.2 / 5
- **Survey response rate:** 27%
- **Lowest CSAT scores observed in:** cases with multiple handovers

Common negative feedback themes:

- Delays during escalation
- Lack of clarity in follow-up messages
- Unclear ownership when cases change assignees

Selected Customer Feedback (Qualitative)

The following comments were collected through post-resolution CSAT surveys and are representative of recurring themes:

> "Faster responses were helpful, but consistency in follow-up communication had a bigger impact on our overall experience."
>
> — Enterprise customer, post-resolution survey

> "The issue was eventually resolved, although it was not always clear who was responsible for the case during escalation."
>
> — Key account feedback, quarterly review

---

7. Escalations and Handover Insights

- **Cases with at least one reassignment:** 34%
- **Cases with two or more reassignments:** 9%
- **Average additional resolution time per reassignment:** +6.5 hours

Escalations most frequently occurred in:

- Integration setup
- Performance-related issues involving third-party services

---

8. Regional Notes (Internal Use)

- EMEA showed the fastest average response times across all channels
- APAC experienced longer resolution times during peak onboarding periods
- Regional coverage gaps were most visible during local business hours transitions

---

9. Interpretation Guidelines

When using this data for summaries or explanations:

- Percentages represent exact shares of total ticket volume
- Averages may mask variation between issue categories
- CSAT scores should be interpreted alongside qualitative feedback
